PRESS RELEASE

Clinerion’s Patient Network Explorer offers clinical trial performance data for sites in its global site network.

Clinerion’s Patient Network Explorer adds new, actionable functionality to support clinical trial sponsors during site selection. The platform now shows current and historical clinical trial performance data for all partner hospitals and trial sites in Clinerion’s worldwide patient network.

Effective immediately, users of Clinerion’s Patient Network Explorer can review detailed clinical trial statistics on an individual hospital level. Derived and mapped from multiple public sources, this new functionality allows for browsing, filtering, reviewing, and comparing site trial performance statistics, including breakdowns on studies by sponsor, by condition, by trial phase and by recruitment status.

The possibility to further filter by study status, sponsor, phase, or condition offers detailed results and a list of the respective studies which provides more information such as on other locations where the study is being conducted.
“It is crucial, during site selection, to have as much information at hand as possible, to avoid expensive detours and dead ends,” says Ian Rentsch, CEO of Clinerion. “Patient Network Explorer is becoming everything a sponsor needs to identify the right site for their trials.”

Clinical trial performance data in this service is powered by Longtaal. For more information, please visit: www.longtaal.com

About Clinerion

Clinerion accelerates clinical research and medical access to treatments for patients. We generate real-world data from our global network of partner hospitals for Real World Evidence analyses. Clinerion’s Patient Network Explorer radically improves the efficiency and effectiveness of clinical trial recruitment by offering data-driven protocol optimization, site feasibility evaluation and real-time patient search and identification to match patients to treatments. Clinerion facilitates the participation of partner hospitals in leading-edge, industry-sponsored trials and time savings in patient recruitment. Researchers gain access to real-time, longitudinal patient data from electronic health records for analysis. We enable pharmaceutical companies, CROs and SMOs to shorten patient recruitment and save costs by streamlining operations and leveraging strategic intelligence. Clinerion’s Patient Network Explorer also provides a platform for integration of diverse patient data sources into real-world data ecosystems. Clinerion’s proprietary technologies comply with international patient privacy and data security regulations. Clinerion is a global data technology service company headquartered in Switzerland.
