

PRESS RELEASE

Basel, Switzerland, October 31th, 2019.

Clinerion partners with PPC to bring Patient Network Explorer coverage and services to patients and hospitals in Korea, China and Taiwan.

- PPC will offer Patient Network Explorer services for accelerating clinical trial site selection and recruitment in Korea, China and Taiwan.
- PPC will support Clinerion in the expansion of their hospital network in Korea, China and Taiwan.

As part of the partnership, PPC will use the Patient Network Explorer platform to advance clinical trials, trial enrollment, and accelerate global studies conducted in the People's Republic of China, the Republic of China (Taiwan) and the Republic of Korea (South Korea). PPC will encourage hospitals to participate in Clinerion's Patient Network Explorer platform for generation of RWD/RWE and bringing more global studies to hospitals.

PPC provides a fully integrated solution for Phase I-IV studies in Asian countries. PPC is dedicated to serve the pharmaceutical and biotechnology industry with world-class quality and cost-effective solutions to shorten the lead time to market. PPC provides full services for clinical trials, such as Project Management, Regulatory Affairs, Clinical Monitoring, Biostatistics, Data Management, Medical Writing, and Pharmacovigilance.

Patient Network Explorer supports patient health by matching patients from Clinerion's global network of hospitals to clinical trials conducted by pharmaceutical sponsors or researchers performing academic investigations. The system is based on de-identified EHR data, unlinked from any identifiers, protecting patient privacy. The partners' combined services will accelerate access for patients and hospitals to next-generation medical treatments. Patients in the region will become more visible to sponsors for trial recruitment, and hospitals in the region will become better placed to run clinical trials, ultimately accelerating drug launch.

"We are excited to be partnering with Clinerion to jointly offer our customers access to global integrated recruitment services through the Patient Network Explorer platform," says Michael Stibilj, CEO of PPC. "This relationship will enable researchers and hospitals, in our region, to have additional opportunities to be involved in global trials, also providing patients access to new potential treatments. Increased access to patients will speed up the clinical trial process and help accelerate the development of break-through products."

"The strength of Patient Network Explorer lies in its global coverage," says Ian Rentsch, Clinerion CEO. "Clinerion's hospital network currently covers 19 countries and over 73 M patients. The partnership with PPC promises to deepen our presence in Korea and Taiwan, and expand our coverage to China. Clinerion continues to build our global presence!"

About Clinerion

Clinerion accelerates clinical research and medical access to treatments for patients. We use proprietary technologies for analysis of patient data from our global network of partner hospitals. Clinerion's Patient Network Explorer radically improves the efficiency and effectiveness of clinical trial recruitment by offering data-driven protocol optimization, site feasibility evaluation and real-time patient search and identification to match patients to treatments. Our technology solution provides real-world evidence analytics for medical access. Clinerion facilitates the participation of partner hospitals in leading-edge, industry-sponsored trials and time savings in patient recruitment. We create innovative and disruptive fit-for-purpose solutions which enable pharmaceutical companies to shorten patient recruitment and save costs by streamlining operations and leveraging strategic intelligence. Clinerion's proprietary Big Data analytics technologies leverage real-time data from electronic health records which comply with international patient privacy and data security regulations. Clinerion is a global data technology service company headquartered in Switzerland.
