

## Full Stack Developer (Senior) (f/m/d) (2 positions)

### We want you!

Clinerion is a Swiss-based software and real-world data services company with international operations in Switzerland and Turkey. Clinerion provides disruptive software solutions supporting life sciences companies and hospitals in the process of developing new medicines.

One of our key solutions is the Patient Network Explorer (PNEx), a platform which generates real-world analytics for Real World Evidence and supports clinical research by automatically finding eligible patients for clinical studies in Big Data settings, such as hospitals and other healthcare organizations. In drug development, this addresses a major problem of finding significantly more eligible patients faster and at lower costs. PNEx works through integration with electronic health records at a global network of partner hospitals and represents a federated network of servers, allowing central querying and local patient identification.

To strengthen our existing development team in our office in Istanbul, we are currently looking for 2 passionate and enthusiastic **Full Stack Developers** with a focus on frontend, an eye for design and usability, and the ability to take on the occasional backend development tasks.

### Your Role

As a member of the Clinerion development team, you will build responsive web applications using the Google Web Toolkit (GWT) framework and the Dart framework (Angular based). Maintenance of existing code and fulfilling requests for incremental enhancements are part of this role.

The ideal candidate will be someone with a deep understanding in web application development best practices, as well as HTML, CSS and JavaScript.

You will work in a collaborative team environment that encourages performing at your best and challenges you to create modern, interactive and responsive user interfaces. You will work closely with analysts, developers, test team and technical lead to design and develop robust and scalable software.

### Your Responsibilities

- Design and develop responsive web pages with state-of-the-art technologies using the Google Web Toolkit (GWT) framework and the Dart framework (Angular based).
- Implementation of business logic and persistence layer, Integration of 3rd party applications if necessary
- Maintenance of existing code and fulfilling requests for incremental enhancements.
- Functional unit-testing, documentation and bug-fixing.

### Your Profile

- Bachelor's or Master's degree in computer science or closely related discipline.
- Minimum 6 years of relevant experience on the job.
- Excellent English language skills, verbally and in writing.
- Deep experience using modern web frameworks with focus on Google Web Toolkit (GWT 2.8 or higher) and Google Dart (Dart 1 or higher).
- Very good Java development experience with focus on Eclipse as IDE.
- Deep knowledge and experience of web application frameworks, HTML/HTTP, DOM, CSS, JavaScript (Angular/ jQuery), AJAX, responsive web design, cross-browser compatibility, and client-side performance optimization, HTTP protocol and SOA architectures (e.g. SOAP, REST).
- Deep knowledge of JavaScript data visualization libraries like D3.js, Chart.js, Leaflet.
- Very good experiences in user interface design and ergonomic applications experience.
- Very good knowledge of backend development and understanding of relational database technologies service architectures, Spring, JDBC, Hibernate.
- Experience with Agile Scrum methodology.

- Ability to work independently or as part of a team in a distributed environment. Effective interpersonal and communication skills.
